Deployment

Do you have a need for replacing outdated infrastructure? We will help determine your Azure deployment goals with key stakeholders from inception to completion.

Migration

If you have existing on-premises Server infrastructure, we will help create a migration strategy that works for you.

Service Management

Do you know who your service administrators are? Do you know what permissions they have across Azure Fabric? We can help you identify and secure your Azure Service that provides a standardized set of governance policies.

Security

If you have concerns with remote access, password management, Data Classification or Data Protection, we can help develop and implement a plan that eases your concerns

Automation

We can help automate these tasks through the Azure Automation platform, or help ensure platform uniformity using Desired State Configuration.

Backup & Disaster Recovery

If you are using stand-by hardware, outdated Tape Backups, or have any data-risk concerns, we can help you migrate to the Azure Recovery Service Platform.
